PROFESSIONAL SUMMARY

Full-Stack Software Developer with experience building web and mobile applications, developing business systems, and maintaining production software. Strong in implementing complex business logic, improving application performance, and solving technical challenges. Adaptable across different technologies, with a focus on writing maintainable code, improving existing systems, and taking ownership of software from development through deployment.

TECHNICAL SKILLS

Mobile Development: React Native (CLI), iOS & Android App Development, Xcode, Android Studio, CocoaPods, Gradle, App Signing, Build Configuration, App Deployment
Front-End: JavaScript, TypeScript, React, Next.js, Vue.js, HTML, CSS, Tailwind CSS, MUI, shadcn/ui, TanStack Query, Axios, REST APIs
State Management: Zustand, Redux Toolkit
Back-End & Database: Node.js, Express.js, NestJS, Supabase, PostgreSQL, Prisma
Interactive Web Development: Phaser, Three.js, WebGL, PeerJS
Development & Collaboration Tools: Git, GitHub, GitLab, Bitbucket, Postman, Jira, Confluence

EXPERIENCE

App-Bar | Central, Hong Kong
Front-End Developer (Web & Mobile) | July 2024 - Present

- Developed and maintained enterprise web and mobile applications using **React Native, React, Next.js, and TypeScript**, delivering production features for AXA HUMA's employee engagement platform and content management system across Hong Kong and Macau.
- Contributed to the **AXA HUMA app-wide revamp and rebranding**, modernizing the user interface, improving navigation, and replacing WebView-based sections with native React Native components to improve performance and deliver a more consistent experience across iOS and Android.
- Developed employee engagement features spanning internal social networking, peer-to-peer exchanges, employee recognition, rewards, and event management, including an Annual Dinner RSVP system that processed over 1,380 registrations.
- Modernized the **AIA ONE application and CMS** by migrating legacy class-based components into reusable structures, improving code maintainability and consistency across the platforms.
- Managed **iOS and Android build configurations and production releases** across SIT, UAT, and PROD environments, resolving Xcode, CocoaPods, Gradle, and code-signing issues while supporting QA testing and deployment.
- Built interactive event applications for **HKSTP 2026** using React, TypeScript, Phaser, Three.js, and WebGL, featuring physics-based games and real-time synchronization between iPads and external displays.

Workstream PH | Workstream Billing System | Clark Center, Pampangga, PH
Freelance / Project-Based Full-Stack Web Developer | January 2026 - July 2026

- Developed a web-based billing and accounting platform using **React, TypeScript, Zustand, Supabase, and PostgreSQL**, centralizing monthly client billing, employee cost management, financial reporting, and invoice generation previously handled through multiple Excel spreadsheets.
- Automated complex salary and billing calculations across **10 adjustment categories**, including overtime, absences, resignations, disputes, and retroactive payments, reducing manual calculations and improving consistency across billing periods.
- Engineered billing logic for **3 employee movement scenarios**—new hires, replacements, and reallocations—handling prorated salaries, client refunds, and AUD-to-PHP exchange rates to support accurate billing across multiple clients.
- Improved financial data integrity by preserving historical billing records, resolving discrepancies in salary and 13th-month computations, and building client-specific Excel invoice exports with detailed billing breakdowns.

World of Minifigs by Brick Extreme LLC | Mandaluyong City NCR, PH
Freelance / Project-Based Front-End Web Developer | April 2025 – Sept 2025

- Developed an interactive LEGO minifigure customization application using **React, TypeScript, Vite, Zustand, and Tailwind CSS**, allowing customers to browse products and build personalized minifigure designs for an e-commerce platform.
- Integrated **REST APIs and TanStack Query** to handle product data, browsing functionality, and customization workflows, working closely with the backend developer to connect the application with existing e-commerce services.
- Designed a modular application architecture with reusable UI components and centralized API integrations, simplifying feature development and providing a maintainable foundation for future enhancements.

EDUCATION

PHINMA- University of Pangasinan | Dagupan City, Pangasinan PH
BS – Computer Engineering | June 2019 - June 2024

Award: Best Capstone Design - Firefighting Drone Hexacopter | June 2023
